BonEffice system

Facts

TBB. The Business Booster BY KIC INNOENERGY

BonEffice system	Unit	Before implementation of Boneffice System	After implementation of Boneffice System	Difference
Net efficiency	%	38,50%	40,00%	1,50%
Consumption of chemical energy of coal	GJ	9 141 050	8 798 326	-342 724
The annual electricity production	MWh	950 000	950 000	0,00%
The annual consumption of coal	ton	380 000	365 753	-14 247
The annual cost of coal with delivery USD/t 57	EUR	21 660 000	20 847 905	**-812 095**
The cost of CO2 emissions	EUR	4 845 728	4 773 042	**-72 686**
Total savings on fees for using the environment	EUR			**-64 978**
TOTAL SAVINGS	**EUR**			**-949 759**

Real data from prototype project
we conducted in major Polish energy producer
– proven, not hypothetical

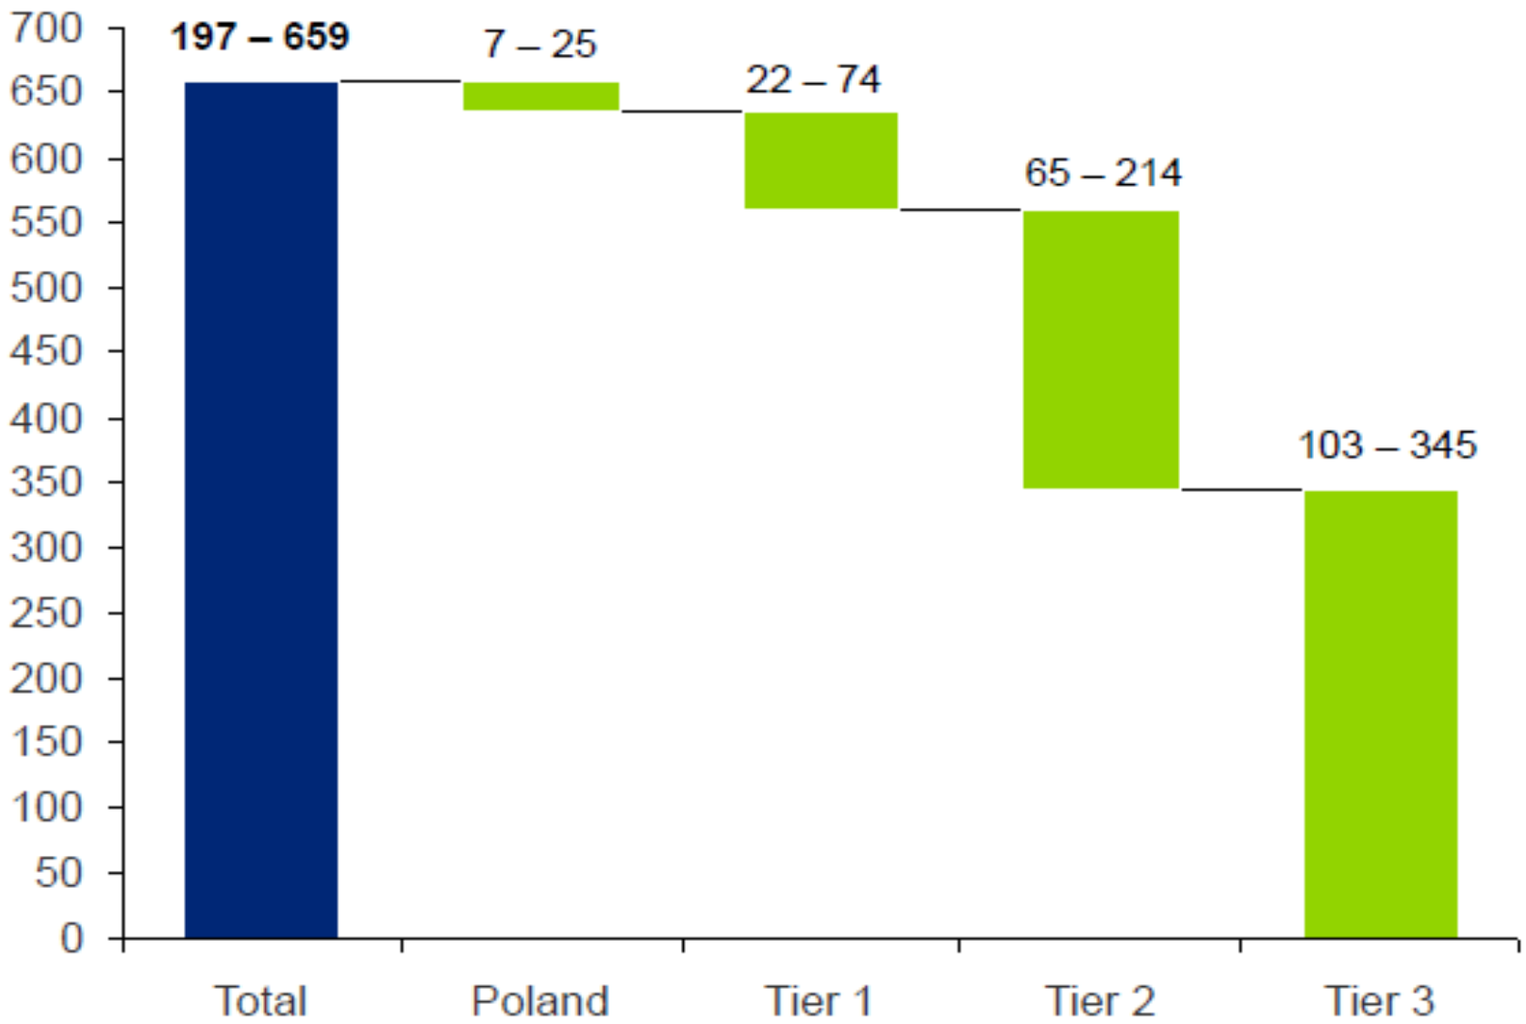
What is BonEffice System

- We provide a **software management system** that improves the efficiency of power generation
- The software shows in real time gaps between potential efficiency and reality
- The System can produce savings of 2-3% of fuel cost
- Our Engine, computer based modeling tool, is secured by European Patent Office

4 Client/Sales/Market

The overall potential market size was estimated in the wide range of USD 197-659m due to wide range of potential savings generated by the system (1,5%-2,5%)

Estimation of BonEffice addressable market (2013, USD m)



Source: Deloitte analysis

Comments

- The wide range of market size is connected with the fact that BonEffice system allows reduction of fossil fuels usage by 1.5 - 2.5% plus additionally reduce costs incurred for coal and carbon allowance. The exact effect depends on each power plant unit and is impossible to measure without an audit
- Poland, Tier 1 (Germany, Czech Republic and UK) and Tier 2 (USA) should be considered as a priority markets for BonEffice.
- Poland as a „track record building" market
